

NeoCenter For Public Safety

Modern-day surveillance systems work in silos, making it difficult for Operators to see subtle connections between suspicious activities detected.

NLS' NeoCenter (formerly known as the Smart Command Centre) For Public Safety boasts multiple AI detection and analytical capabilities, allowing for true incident correlation. This gives Operators a 360° view of every Person-Of-Interest in a monitored area, and the means to rapidly respond to threats to our public safety.

Challenges

Surveillance today relies heavily on monitoring camera footage, which has middling success in detecting incidents as they happen. These systems stop at detection, meaning they merely raise an alert and provide no further support.

Solution Concept: NeoCenter

Rather than depending solely on human monitoring, NeoCenter's AI-powered systems work in tandem with Operators to detect and response to threats with increased speed and accuracy.

- ✓ Signature DET3R (Detect, Tag, Track, and Respond) Framework goes beyond detection to provide a holistic solution to threat response
- ✓ Provides a 360° view of Persons-Of-Interest, including past appearances and associated incidents
- ✓ Leverages on top-class NEC AI technologies, including Facial Recognition, Abandoned Object Detection, and Loitering Discovery

VALUES FOR SOCIETY:

Towards an abundant society for all people to live happier and more prosperous lives.

NEC is more than cutting edge technologies that meet business demands. We are also committed to generating social value, revolving fundamental issues of society and our customer, through the development of higher-level ICT assets that are ahead of their time. Our solutions for society focus on four core social values: Safety, Security, Efficiency and Equality. By working with commercial organisations and government institutions, we identify issues, develop solutions and resolve social problems from global angle, becoming the partner that our customers - and the world - can depend on.
